---

Principal DevSecOps Engineer

SUMMARY

Principal DevSecOps Engineer with 22 years hands-on experience who has served in roles including Senior Cloud Architect and Development Technical Lead. Capable of delivering cloud adoption, test-driven development, consumer-driven contracts, event-driven ecosystems, and DevSecOps pipelines. Full-stack aware, including iOS native, ReactJS UI, golang, Python, and 17 years Java experience. Capable of wielding AI while curating AI delivered work products. Provided engineering direction and decision making for a Fortune 10's $90B/year revenue stream while leading a team of 450 engineers spanning three continents. Experience in data processing in Azure Databricks. Provided leadership for successful delivery of 12-factor applications as Spring Boot containers on Kubernetes. Engaged in applying Agile and leveraging DevSecOps CI/CD pipelines. Hands on with Linux administration, cloud server virtualization, and monolithic decompositions.

PROFICIENCIES

Cloud Engineering - 11 years

Azure, AWS, GCP, Pivotal Cloud Foundry, Kubernetes, OpenShift, Swarm, Terraform/IaC, Disaster Recovery, Docker, AKS, EKS, Entra AD

Cloud Security - 6 years

Imperva WAF, Hadrian External Attack Surface Management (EASM), Wiz Cloud Security Posture Management (CSPM), Prisma Cloud

SecOps - 6 years

GitHub Advanced Security, JFrog Curation, OWASP ZAP DAST, Okta, Veracode, CyberArk, BugCrowd, OIDC, SAST, SCA, TLS/ACME, Claude Security, VulnHunter

DevOps - 11 years

GitHub Actions, Terraform, Copilot, Claude Code, Docker, Kubernetes, JFrog, Gitlab, Jenkins, Vagrant, Ansible, GitFlow, Jira, BitBucket, Bamboo, Gradle, Subversion

Compliance - 6 years

OneTrust GRC, LeanIX, ServiceNow, PCI DSS, HIPAA, SOX, SOC 1, SOC 2, SailPoint

Java - 17 years

Spring Boot Microservices, Unit, JMockit, Hibernate, Camel, Gradle, OSGi, JDBC, Apache Tomcat, Apache ServiceMix, Maven, Groovy, Spock

Golang- 6 years

Gin Microservices, CLI utilities, Scratch Docker containers, multi-stage Docker builds

JavaScript - 7 years

ReactJS, NPM, Yarn, Bootstrap 4, ES6, ES7, Chai, Jasmine, JQuery

Eventing and NoSQL services - 10 years

Kafka, Azure Event Hubs, Cassandra, Redis, MongoDB, Azure Databricks, MQTT, RabbitMQ, ActiveMQ, Tibco, 12 -Factor, CAP Theorem, Event Driven/Saga, Open API

SQL - 18 years

Oracle, MySQL, PostgreSQL, MS SQL Server

EXPERIENCE

McKesson Irving, TX *Oct 2022- Sept 2026*

Principal DevSecOps Engineer coordinating security efforts for over 3,000 engineers at McKesson including a Veracode to GitHub Advanced Security migration, data pipelines for executive dashboards extracting data from Hadrian, Wiz, LeanIX, ServiceNow, and GitHub as well as led engineering team engagement triggered by disclosures from BugCrowd VDP.

JFrog Curation *6 months*

Coordinated the rollout of JFrog Curation to mitigate compromised dependencies including coordination with procurement, ZSCaler networking controls, change management teams, and SIEM data ingestion. Network blocks deployed using ZScaler for npm, golang, rust, and rubygems.

Veracode to GitHub Advanced Security *12 months*

Led a team of four engineers overseeing the migration of Veracode SAST, SCA, and DAST components to GitHub Advanced Security SAST/SCA and OWASP ZAP DAST for over 14,000 repositories. Rolled out reusable GitHub Workflows, internal documentation, demonstration repositories and delivered data pipelines showcasing alert type, severity, and age trends for executive discussion and compliance team engagements.

BugCrowd VDP *6 Months*

Coordinated VM provisioning using Terraform IaC with GitHub Action pipelines for BugCrowd Penetration Testing contractors to be assigned Kali Linux VMs managed within McKesson network for penetration test efforts. Observability and threat controls in place coordinated across teams including Network Security, Cyber Detect and Hunt, and Incident Management. Automated data pipelines delivered for executive monitoring, including findings and campaigns.

B2B Connect Datacenter Cloud Migration *18 Months*

Served as Principal Cloud Architect for McKesson's B2B Connect Ordering, a $90B/year revenue stream including customers ranging from small pharmacies to United States Veteran Affairs (VA) for drug distribution. Involved with team coordination for ensuring DEA drug distribution compliance and meeting new Drug Supply Chain Security Act (DSCSA) mandates. Hands-on with implementing deployment pipelines using GitHub Actions with assets landing on Azure Kubernetes. Designed APIs using Open API 3.0 specifications. Coordinated the migration of an L2 support vendor change, including redefining access controls from an ABAC solution to a Terraform RBAC solution using Azure Entra AD.

Signify Health Dallas, TX *Jan 2022- Oct 2022*

Staff Software Engineer working remotely for Signify Health to deliver next-gen CI/CD initiatives with a new AWS Kubernetes (EKS) hosting platform based on GitHub Action workflow pipelines and Terraform Infrastructure as Code.

Microservice Security Initiatives *2 Months, Agile*

Led and organized initiatives with our security team to integrate existing services for improving security visibility and attack vector detection. We prepared an integration and hosting of Clair for container scanning, including an RDS PostgreSQL instance for Docker manifest layer storage. Integrated to SonarQube for code smells. Integrated to Snyk.io for dependency and license checks. Adopted checkov for Terraform, Docker, and Kubernetes static code analysis.

CI/CD Delivery via GitHub Actions *2 Months, Agile*

Led initiative for GitHub adoption with build agent customization, including privilege via AWS IAM (IRSA) and integration with AWS Secrets Manager for secret retrieval. Automated delivery into an EKS cluster for automated scaling and right-sizing of self-hosted build agents. Python, Golang, .NET, npm, and Terraform client build agents provisioned with automated scale.

AWS EKS *2 Months, Agile*

Led engineering efforts for Terraform Infrastructure as Code delivery of an AWS EKS platform, integrating to multiple environments including hosting SRE shared services. Integrations delivered for OpenSearch, New Relic (APM), cert-manager.io for automating certificate issuance, external-dns for automated A and CNAME record issuance, Terraform Cloud for infrastructure state management, and service account labeling for privilege granting autonomy for infrastructure management. Traefik leveraged for Ingress exposure via ALB.

Workforce Logiq @ Toyota Fort Worth, TX *Jan 2021- Dec 2021*

Contractor for Workforce Logiq on assignment at Toyota, developing golang microservices deployed to AWS, on-premise Kubernetes, and providing technical leadership for automotive services automation.

Power Architect *2 Months, Agile*

Designed contracts and implemented service for power management of an IoT suite of devices. Technologies leveraged including golang modules, MQTT, Elastic, Fluent-bit, Kibana. Gitlab used for CI/CD.

CLI SDK *2 Months, Kanban*

Designed and implemented a command-line SDK for interfacing with internal offerings of the assigned team. Proprietary project sprawling many services requiring user orchestration brought under a single utility toolkit delivered as a

binary for Linux, MacOS and Windows powershell users complete with content assist and command autocompletion. Gitlab used for CI/CD.

Live View *2 Months, Kanban*
Designed and implemented a websocket-driven, live presentation of current device state. Leveraged existing IoT integration touch points with microservice API and websocket design to bring full service view of lab state into a browser. Gitlab used for CI/CD delivery of Docker containers.

Golang Rewrites *2 Months, Kanban*
Brought in initially to review two existing unstable and difficult-to-maintain python services with low unit test coverage and high rate of failure. Designed and re-implemented with parity for existing contracts and integrations. Throughput and capacity increased, with improved unit test coverage leveraging gomock, reduced function length and low rate of failure.

BNSF Railway Fort Worth, TX *Feb 2017 - Dec 2020*
Contractor for HCL on-site at BNSF Railway serving as Enterprise Cloud Architect for RIDE. Our team delivered a crew management logistics system for railway staff onto Azure cloud.

RIDE iOS Mobile Architect *4 Months, Agile*
Serving as Enterprise Architect applying Consumer Driven Contracts for REST API integration with a native iOS iPad application. Identity management designed and implemented using the Azure OpenID Connect offering. Designed and implemented Spring Boot microservices consuming data from Kafka with Cassandra persistence.

RIDE Azure Infrastructure *3 Months, Kanban*
Served as DevOps lead engineer for an infrastructure management team delivering Terraform provisioned infrastructure including VMs, ingress/egress firewall management, load balancing, DNS controls, and CIDR assignments. Improved automation, state monitoring, and issue detection by providing a Rundeck service executing a Python 3.6 wrapper to the Terraform commands coupled with Prometheus integration for infrastructure scale and health monitoring.

Private Key Material Management *6 Months, SAFe Agile*
Served as OpenShift solutions architect and technical lead for the BNSF Enterprise Security team working on private key material management. Focus on DevOps integration and automation for securing sensitive event topics and 12-factor application TLS exposure. Full automation of authentication issuance via mTLS for internal service-to-service with signed JWT for users and external customers.

Microservice API Production Monitoring *4 Months, SAFe Agile*
Served as Product Owner and Technical Lead for identifying applicable toolkits supporting OpenShift and Kubernetes monitoring. Performed requirement gathering and stakeholder identification ranging from technical staff to business leadership. Evaluations included Dynatrace, App Dynamics, New Relic, Nagios, Graphite/Grafana, and ELK.

Securing REST and Identity Management *5 Months, SAFe Agile*
Provide stateless components and integration suite for migration to a modern JWT based identity solution. Integration components built for migrating existing stateless SOAP and REST APIs, Spring Boot microservices, service-to-service application communication, and JSF/JSP WAR legacy applications. Full support for native mobile IOS and Android applications.

BlueMix and Cloud Foundry Evaluation *3 months, SAFe Agile*
Evaluate the enterprise readiness for IBM BlueMix with integration to Jenkins CI/CD pipelines for private cloud migration. Prepare best practice outlines and documentation for adopting Cloud Foundry command line utilities, configuration management, and deployment architecture.

Cache Service Evaluations *3 months, SAFe Agile*
Served as technical lead evaluating cache offerings for Java applications to support J2EE migrations to OpenShift. Evaluations included Reddis, Caffeine, Infinispan, JBoss Data Grid, Ehcache, Hazelcast, and Memcached.

Spireon Irving, TX *July 2016 - February 2017*
Joined a Spring Boot Microservice REST API software team developing, testing, and reviewing security for services deployed on Amazon AWS as a Senior Software Engineer.

JWT Identity Management *3 Months, Agile*
RESTful security transition to JWT identity services served via a Tyk Gateway and nginx reverse proxies. Responsible for implementation of the caching integration to Redis and ehCache on a Java 8 Spring Boot microservice, with a JPA based MySQL integration. Personally achieved 80% unit testing coverage of both lines and branches with cobertura code coverage delivered via Jenkins CI builds. Implemented CXF REST services. Localized authentication and principal managed via Spring Security. Performance tested using the NodeJS Artillery module.

Platform API *3 months, Agile*
RESTful service managing vehicle asset exposure and geo-locational data. Responsible for reviewing the existing elasticsearch integration, improving search behavior, and providing business logic testing to available searches. Improved

both unit testing code coverage, negative test case coverage, and security testing using Frisby and JUnit 4. Aided in improving the gradle build process and improving Jenkins CI builds and automated integration testing.

TEKsystems @ SWA Dallas, TX *March 2016 - July 2016*
Contractor for TEKsystems as Java Technical Lead at Southwest Airlines HQ serving a team of developers managing a passenger data service which exposes Oracle persisted content via SOAP APIs and updates the same data warehouse via consuming messages off of a bridged Tibco Message Queue built on JMS.

Python Automation Initiative *3 Months, Iterative*
Recognized an opportunity to improve speed of delivery and reduce manual errors with automation of an internal deployment process. Using Python, an error prone deployment involving manual HTML form submission reduced team's involvement by 35 man -hours per week.

PDS Retirement *3 Months, Waterfall*
Participated as technical lead of support staff to aid in monitoring of a migration and retirement of an XML warehouse.

Xpressdocs Fort Worth, TX *July 2015 - March 2016*
Joined a print firm delivering integration solutions to digital print equipment for real estate marketing, business cards, and advertising campaigns.

JDserv *6 Months, Iterative*
Responsible for assisting the migration of a team from waterfall development to Agile Methodologies. Provided development leadership in updating products from Java 6 to Java 8, Ant to Maven, develop CI and CD Jenkins builds, work with IT to deliver JMX monitoring touch points, and aid in developing a Jira workflows.

MelissaData Smart Mover *1 Month, Waterfall*
Independently developed an integration service that provided a 750% performance improvement in CASS and NCOA address validations using a producer/consumer design pattern over REST API. Provided a JAR artifact deliverable with 97% code coverage and end-to-end integration tests against a public sandbox test service.

Alcatel-Lucent, Contractor Austin, TX *June 2009 - April 2015*
Provided software contracting services for the telecommunication industry including endpoint management, mobile services, and electric smart metering network solutions.

Mobile Push Services *4 Months, Agile Project*
Designed and implemented integration services for notifying mobile customers of

service outages based on network diagnostics and batch notifications. Integrations provided for both Google Cloud Messaging and Apple Push Notification Service. Responsibilities included architecture, implementation, unit testing, performance testing, integration testing, and installation scripting for Linux servers.

Smart Device OSGi Services *24 Months, Agile Project*
Designed and implemented REST API services for mobile and browser based applications allowing us to reach new customer bases, including the electric smart metering device market. Responsible for server implementation, requirement gathering, performance testing, security testing, Linux installs, and service design.

Endpoint Communication System *6 Months, Agile Project*
Designed and developed Spring-DM OSGi Apache ServiceMix bundles for a push notification architecture supporting PC, Mac, and mobile platforms expanding client installations by hundreds of thousands of units. Responsibilities included server design, implementation, unit testing and directing remote test staff for QA testing and performance testing.

Client Application Framework *15 Months, Agile Project*
Developed a PC solution for an application store built on top of OpenJDK and the Apache Felix OSGi stack. Responsibilities included implementation of a locally installed Jetty client service for accessing PC help flows and account management.

Broadband Care Manager *6 Months, Agile Project*
Provided support in moving the legacy EAR project suite from manually built to a robust Maven build system centered upon a subversion repository with Atlassian build and project management tools. Improved in-house Eclipse RCP workflow utility and reduced user installation errors with a newly developed NSIS installer.

TransUnion Austin, TX *Jan 2005 - April 2009*
Developed flood research solutions as well as automated home valuation software for real estate and credit reporting industries.

Hornet *12 Months, Iterative*
Improved automation output by a factor of 5,000 reducing hardware cost and improving customer feedback with faster turnaround for batch requests. Major factors contributing to the improvement included a new geospatial indexing architecture, custom RAM management, and multi-threading techniques.

Hard Rain *24 Months, Iterative*
Developed a flood research application integrating many different data providers into an Eclipse RCP (OSGi) based application. Provided map synchronization and geospatial toolsets to achieve pinpoint accuracy for floodplain identification.

EDUCATION

University of Texas at Arlington *Jan 2000 - Dec 2004*
Graduated summa cum laude with a Bachelor of Science in Software Engineering.

Online Courseware
Linux Academy: Docker - Deep Dive
Linux Academy: Using Terraform to Manage Applications and Infrastructure
Udemy: AWS Certified Developer - Associate 2019
